		Solution Implementation of Nasdaq Boardvantage to improve governance and efficiency

Drive Efficiency with a Comprehensive Solution

CLIENT PROFILE: BALLAD HEALTH | 500 USERS ACROSS FIVE TEAMSPACES

As a newly established health system formed by the merger of two regional health systems, Ballad Health was operating on different board-portal solutions and unhappy with the disjointed user experience. Consequently, the organization wanted to consolidate its two existing portals into one centralized portal. Nasdaq Boardvantage met their needs by providing an all-in-one board meeting and

collaboration solution for 500 users across five TeamSpaces. Nasdaq Boardvantage’s TeamSpaces provide an efficient way to separate content among the 21 hospitals, control access to that content, and customize the user experience within one system. Users have also reported positive experiences owing to ease of use and accessibility, as well as high-touch customer support.

Collaborate in a Paperless Environment

CLIENT PROFILE: BERMUDA HOSPITALS BOARD (BHB) | 55 USERS

BHB needed a more robust solution to improve its collaboration, reporting, and managing and tracking of tasks. Nasdaq Boardvantage offered an easy solution, providing BHB with a streamlined audit trail to track the actions of its 55 users. BHB has now gone paperless

with the help of Nasdaq Boardvantage’s one-click approvals, annotations, and e-signatures. Digital rights management (DRM) is a key feature of the portal that has helped BHB eliminate its paper trail and move towards more sustainable processes.

Reduce Costs with Increased Security

CLIENT PROFILE: UCSF BENIOFF CHILDREN’S HOSPITAL SAN FRANCISCO | 68 USERS

Board members of UCSF Benioff Children’s Hospital San Francisco had prior experience with various board-portal services. However, they wanted to settle on one solution: specifically, one with more stringent security and a reasonable cost. Nasdaq Boardvantage proved to be superior and was implemented in January 2018, providing a more secure solution for its 68 users. By leveraging Nasdaq Boardvantage, the hospital continues to discover ways to collaborate and communicate securely across the board and leadership team, all with associated cost savings and improved

transparency and efficiency. A key benefit has been the ability to easily access and update meeting information with the comfort of knowing that confidential content is protected. UCSF benefits from access to innovative security features, including secure online and offline access, in-system email and notifications, and granular permission-based controls. These features allow users to search, organize, and share general board meeting materials, governance policies, patient files, and more.
