# Analyst Corner

nrc HEALTH

Your data. Without limits.
Custom data views and platform integrations leave no insight undiscovered.

Your data. Without limits.
Analyst Corner from NRC Health

Healthcare data analysts are often in search of the answer to a single question—Why?—and they perpetually seek answers hidden within their health systems' vast data streams. To meet the demand of answering this question, these analysts seek advanced calculations, aggregations, and data views to help them better understand the driving forces behind their organizations' metric performance.

Analyst Corner from NRC Health offers a library of pre-built analyst-designed reports, the ability to build and embed custom dashboards, and the flexibility to export and integrate NRC Health data sources into other platform workflows.

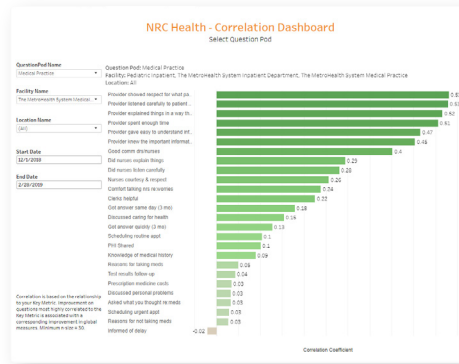

Reports by analysts, for analysts

The Analyst Corner report library was built based upon the most frequently requested reports from NRC Health customers. It features on-demand pre-built reports such as correlation drivers, benchmark comparisons, control-chart dashboards, and statistically significant trends. This library will continue to grow as needs evolve in analyzing the healthcare customer experience.

Data everywhere you need it

Analyst Corner's reporting integration delivers ultimate flexibility in data interoperability. Data can be transferred via NRC Health's application programming interface (API) to fully automate data integration, or by utilizing a safe file transfer protocol (SFTP) with scheduled syncs.

Build-your-own live views

Analyst Corner's data sandbox enables report and dashboard building using an NRC Health–issued business intelligence tool, which gives you the freedom to fully customize the exact metric views, calculations, layout, and branding as you like—all populated by a data feed that's refreshed daily.

Analyst Corner: Top five takeaways

01
Own your data
Your data is yours, all the time—access it 24/7, as you need it.

02
Access analyst-built reports
Our report library features our most popular reports to save time and get you started quickly.

03
Build any view
Not in the library? Design and build pixel-perfect reports and dashboards.

04
Minimize manual efforts
Reduce the amount of time spent on manual data-integration work by utilizing APIs.

05
Share your work
All custom reports become embedded in your portal for others in your organization to leverage.
